

LONG LINE PUBLIC ADDRESS

Cost Effective Solutions For Transportation Terminal Communications

JACQUES

Jacques continuing product development program has for many years been at the forefront of communications innovation in the Asia Pacific region.

Part of this initiative is the development and continuing enhancement of Long Line Public Address systems now an integral part of rail & transportation networks worldwide.

Jacques provide systems throughout Australia, the Middle East and the Asia Pacific region with equipment & consultation provided to transportation hubs & networks ranging from airports, busway systems and rail networks in New South Wales, Western Australia, Queensland & Victoria.

As a leading provider of LLPA technology & systems Jacques are developing new opportunities with many transportation authorities & systems integrators throughout the region.

WHAT IS LONG LINE PA?

The Jacques Long Line Public Address system (LLPA) uses the Jacques 650 series Voice over Internet Protocol (VoIP) technology to create a fully Digital, Networked, Multizone Public Address (PA), and Music Distribution system for large PA and Emergency Warning and Evacuation applications.

A Suburban Rail operator may have a need to provide a Public Address system based on Ethernet and TCP/IP standards, the LLPA system operates over existing network infrastructure, therefore, no requirement for custom cabling or dedicated fibre links. This significantly reduces installation costs and cabling requirements.
